

LIST OF CONTENTS

NUMBERS 1-3

Th. Zimmermann, P. Bomme, D. Eyheramendy, L. Vernier and S. Commend	1	Aspects of an object-oriented finite element environment
M. A. Polak	17	Shear analysis of reinforced concrete shells using degenerate elements
M. Imbimbo and A. De Luca	31	F.E. stress analysis of rubber bearings under axial loads
N. K. Ozturun, E. Citipitioglu and N. Akkas	41	Three-dimensional finite element analysis of shear wall buildings
J. K. Wilson and B. H. V. Topping	57	Parallel adaptive tetrahedral mesh generation by the advancing front technique
U. Kirsch and F. Moses	79	An improved reanalysis method for grillage-type structures
M. P. Saka	89	The theorems of structural variation for solid cubic finite elements
S. Benfratello and G. Muscolino	101	A perturbation approach for the response of dynamically modified structural systems
G. H. Little	113	The dynamic behaviour of elastic steel columns
J. P. Papangelis, N. S. Trahair and G. J. Hancock	125	Elastic flexural-torsional buckling of structures by computer
P. Bhatt and M. Abdel Kader	139	Prediction of shear strength of reinforced concrete beams by nonlinear finite element analysis
G. H. Little and A. G. Kamtekar	157	The effect of thermal properties and weld efficiency on transient temperatures during welding.
A. H. Vermeulen and G. R. Heppler	167	Structural analysis of shells by the b-spline field approximation method
G. Moreau and D. Caillerie	181	Continuum modeling of lattice structures in large displacement applications to buckling analysis
G. J. Turvey and M. Salehi	191	Large deflection analysis of eccentrically stiffened sector plates
Y. M. F. Wahba, M. K. S. Madugula and G. R. Monforton	207	Evaluation of non-linear analysis of guyed antenna towers
A. Nadjai and D. Johnson	213	Elastic and elasto-plastic analysis of planar coupled shear walls with flexible bases

- | | | |
|---|------------|--|
| O. O. R. Famiyesin,
T. G. Davies and
A. H. C. Chan | 231 | Numerical modelling of cyclic loading on reinforced unbound pavements |
| W. Bull and C. H. Woodford | 251 | The use of steel edge surrounds to reduce stress and displacement in concrete pavements |
| A. J. Birch and E. A. Dickin | 261 | The response to uplift loading of pyramid foundations in cohesionless backfill |
| A. Bayraktar and
A. A. Dumanoglu | 271 | The effect of the asynchronous ground motion on hydrodynamic pressures |
| A. Mihelič and B. Štok | 283 | Tool design optimization in extrusion processes |
| M. Y. Rafiq and
D. J. Easterbrook | 295 | Towards a more economic and better understanding of the design of structural sections using a different interactive approach to software development |

NUMBER 4

- | | | |
|--|------------|--|
| Y. L. Xu, D. K. Sun,
J. M. Ko and J. H. Lin | 303 | Buffeting analysis of long span bridges: a new algorithm |
| A. Lorenzana
and J. A. Garrido | 315 | A boundary element approach for contact problems involving large displacements |
| S. H. Lo and C. K. Lee | 325 | Selective regional refinement procedure for adaptive finite element analysis |
| S. Santosa and T. Wierzbicki | 343 | Crash behavior of box columns filled with aluminum honeycomb or foam |
| P. Litewka and J. Rakowski | 369 | The exact thick arch finite element |
| K. Lee and E. Nikolaidis | 381 | Effect of member length on the parameter estimates of joints |
| J. Jönsson | 393 | Determination of shear stresses, warping functions and section properties of thin-walled beams using finite elements |
| C. A. Felippa, K. C. Park
and M. R. Justino Filho | 411 | The construction of free-free flexibility matrices as generalized stiffness inverses |
| C. D. Nha, Y. M. Xie and
G. P. Steven | 419 | An evolutionary structural optimization method for sizing problems with discrete design variables |

NUMBER 5

- | | | |
|-----------------------------------|------------|--|
| Z. Zhao | 433 | A simple error indicator for adaptive boundary element method |
| M. Raoof and I. Kraincanic | 445 | Determination of wire recovery length in steel cables and its practical applications |

- | | | |
|--|-----|--|
| A. Bensalem, A. Sibbald and C. A. Fairfield | 461 | The use of dynamic characteristics for the optimal design of arches |
| A. Krishnan and Y. J. Suresh | 473 | A simple cubic linear element for static and free vibration analyses of curved beams |
| B. W. Lee and O. K. Lim | 491 | Application of stochastic finite element method to optimal design of structures |
| B. J. Ryu, K. Katayama and Y. Sugiyama | 499 | Dynamic stability of Timoshenko columns subjected to subtangential forces |
| D. Z. Huang, T.-L. Wang and M. Shahawy | 513 | Vibration of horizontally curved box girder bridges due to vehicles |
| N. I. Ioakimidis | 529 | Application of computer-generated finite-difference equations to decision and inverse problems in elasticity |
| R. Ganesan | 543 | Vibration analysis for stability of singular non-self-adjoint beam-columns using stochastic FEM |

NUMBER 6

- | | | |
|--|-----|---|
| C. E. Augarde | 555 | Generation of shape functions for straight beam elements |
| D. Touati and G. Cederbaum | 561 | Effects of compressibility on the postbuckling behavior of imperfect viscoelastic columns |
| F. F. Mahmoud, S. S. Ali-Eldin, M. M. Hassan and S. A. Emam | 567 | An incremental mathematical programming model for solving multi-phase frictional contact problems |
| F. Tonon and A. Bernardini | 583 | A random set approach to the optimization of uncertain structures |
| A. Thavalingam, A. Jennings, J. J. McKeown and D. Sloan | 601 | A computerised method for rigid-plastic yield-line analysis of slabs |
| E. Sai Baba Reddy, M. O'Reilly and D. N. Chapman | 613 | Modified T-Z model—a software for tension piles |
| S. Ganapathy and K. P. Rao | 627 | Failure analysis of laminated composite cylindrical/spherical shell panels subjected to low-velocity impact |
| R. Rolfes, K. Rohwer and M. Ballerstaedt | 643 | Efficient linear transverse normal stress analysis of layered composite plates |
| U. Wendt and A. Samuelsson | 653 | Adaptive modelling of plates in bending and shear |
| C. B. York and F. W. Williams | 665 | Aircraft wing panel buckling analysis: efficiency by approximations |
